

Teaching & Mentorship Experience

Extensive experience teaching mathematics, programming, and data science to high school and undergraduate students. Skilled in conducting **online classes via Google Meet and Zoom**, with a focus on **conceptual clarity, problem-solving, and real-world applications**.

Key Teaching Areas:

- **Mathematics:** Algebra, Calculus, Probability, and Applied Mathematics for quantitative reasoning
- **Programming & Data Science:** Python programming for beginners, data analysis with Python and Excel, machine learning fundamentals
- **AI & Project Mentorship:** Guiding students through **AI and data science projects**, including problem formulation, feature engineering, model selection, evaluation, and deployment

I leverage a **hands-on, project-based approach** to ensure students not only understand theoretical concepts but also gain practical skills in coding, data analysis, and machine learning. My mentorship emphasizes **building analytical thinking, creativity, and confidence** in tackling real-world AI and data-driven challenges.
