

My name is Alex Morgan, an AI Engineer with a strong background in mathematics, data science, and applied machine learning. I specialize in building intelligent systems that combine predictive modeling, natural language processing, and data-driven decision-making.

I hold a Bachelor's degree in Applied Mathematics and a Master's degree in Artificial Intelligence. Over the past five years, I have worked on real-world machine learning projects across finance, e-commerce, and education sectors.

My interests include retrieval-augmented generation (RAG), large language models, time-series forecasting, and AI system deployment. I enjoy teaching and mentoring students in mathematics, Python programming, and machine learning concepts.

Outside of work, I actively contribute to open-source projects, write technical blog posts, and explore ways AI can be responsibly deployed in emerging markets.
